Q

Dave...

I noticed today when reviewing your records that the surface water monitoring regime for Wildcat requires that the WCW's (1-4) should be monitored one year prior to the permit renewal (which will be in 2009). Although all four quarters of 2008 were reported as "no flows" for WCW-1 to 4, we would gladly accept any 2009 data that you (or Karla) could obtain prior to permit renewal.

I know getting any flow in that Mancos ditch is tough, but please give it your best effort.

DO NOT try to sample during thunderstorm events.

Thank you.
